### Cover Letter

Dear hiring manager at Churchill Navigation,

My name is Mustafa and I am hungry to learn. I am currently studying full stack development at DU's coding bootcamp. I am loving it and I am learning new things everyday.

The issue is though, my current full time job is nowhere near coding and I am not spending that time applying what i am learning at a professional level.

Also, like any student, I gained enough knowledge to start looking for a job that can take my learning to the next level and throughout my search, I came across Churchill Navigation.

Indeed, I was very excited. Navigation, 3D mapping and the awesome picture at Churchill Navigation homepage was enough for me to jump into the careers page.

But first, I had to visit the About Us section, after all, it is the company in writing. I was impressed since it really gave me an indication of the company's atmosphere.

To be honest, reading the stacks and languages you guys use, some I know and some I never even heard of. It was easy to just close the page and move to something else, but I don't give up so I kept on going and I read this,

"We care less about whether your experience falls perfectly in line with what we are working on and more that you want to learn our stack and bring your experience building solid web applications. We are believers in personal and professional growth, so you can learn in areas you might have less experience and teach where you have more."

Now, This is the truth. I don't know everything, but I am determined to learn and gain more knowledge and use my current experience, creativity and problem solving skills to bring new self-managed talent and positive attitude.

Best

Mustafa Khairalla
